AMENDMENTS TO THE CLAIMS

        This listing of the claims replaces all prior versions, and listings, of claims in the application:

LISTING OF CLAIMS

1.   (Currently Amended) ~~In a mobile device for managing events,~~ ~~a~~ A method ~~for controlling user~~ for enabling a user of a mobile device to control notification of ~~the events~~ events, the method comprising steps of:

        temporarily enabling ~~notifying a user of the occurrence of~~ ~~an event in accordance with~~ a first user notification profile ~~defining~~ defined by notification control options selected by the user of the mobile device; and

        switching automatically to a second user notification profile ~~automatically in response to the satisfaction of~~ when a switch condition ~~thereby to notify the user in~~ ~~accordance with~~ is satisfied, the second user notification profile being defined by preset notification control options.

2.   (Currently Amended) The method of claim 1 comprising ~~defining~~ a step of enabling the user to define the switch condition.

3.   (Currently Amended) The method of claim 2 wherein said switch condition is defined in relation to ~~at least one of~~ a time parameter ~~and a location parameter~~.

4.   (Currently Amended) The   method   of   ~~claim   1~~   claim   2 ~~comprising:~~wherein said switch condition is defined in relation to a location parameter.

~~monitoring the satisfaction of the switch condition to determine the automatic switching.~~

5.   (Currently Amended) The   method   of   claim   2   comprising storing the switch condition in association ~~with a one~~ with one of the first and second user notification profiles to facilitate re-use of a stored switch condition.

6.   (Original)   The method of claim 5 wherein defining the switch condition comprises accessing the stored switch condition for re-use.

7.   (Original)   The method of claim 1 wherein said first user notification profile comprises options defined to disable user notification of at least some of the events and said second user notification profile comprises options defined to enable user notification of said at least some of the events whereby the switching automatically enables user notification upon the satisfaction of the switch condition.

8.   (Original)   The method of claim 1 wherein said first user notification profile comprises options defined to enable user notification of at least some of the events and said second user notification profile comprises options defined to disable user notification of said at least some of the events whereby the switching automatically disables user notification upon the satisfaction of the switch condition.

9.   (Original)   The method of claim 2 comprising:

enabling said first user notification profile to control the notification thereby replacing a previously enabled user notification profile; and

defining said second user notification profile in accordance with said previously enabled user notification profile such that said switching automatically re-enables the previously enabled user notification profile.

10.   (Currently Amended) A mobile device for managing events, the device comprising:

a user interface for the notification of the events, the notification being controlled by a current one of a plurality of ~~profiles~~ user notification, each ~~defining~~ profile being defined by notification options, said user interface ~~comprising~~ comprising:

a profile switch component to automatically switch the current profile to a next profile selected from ~~among~~ the plurality of profiles in response to a switch condition being satisfied;

a profile enablement component to selectively enable one of said profiles to be temporarily defined as the current profile and to define the switch condition that causes the current profile to switch to the next profile.

11.   (Currently Amended) The device of claim 10 wherein the ~~user interface comprises a~~ profile enablement component enables the user to define switch conditions for ~~associating with~~ more than one of said profiles.

12.   (Original)   The device of claim 11 wherein the profile enablement component defines switch conditions in response to at least one of a time parameter and a device location parameter.

13.   (Currently Amended) The device of claim 11 wherein the profile enablement component is adapted to ~~selectively~~ enable ~~a~~ the user to select one of said profiles to ~~define~~ be the current profile.

14.   (Original)   The device of claim 10 comprising a switch condition monitoring component to monitor the satisfaction of the switch condition to determine the automatic switching.

15.   (Currently Amended) The device of claim 11 wherein the user interface is adapted to store the switch condition in association ~~with a one~~ with one of the profiles to facilitate re-use of the switch condition.

16.   (Original)   The device of claim 15 wherein the profile enablement component is adapted to access the stored switch condition for re-use.

17.   (Currently Amended) The device of ~~claim 11~~ claim 10 wherein the profile enablement component ~~defines a~~ comprises a further switch condition that, if satisfied, automatically switches from the next profile to a new next profile ~~for switching to~~ upon ~~satisfaction of the switch condition and wherein said profile switch component switches in accordance with the next profile~~.

18.   (Currently Amended) The device of ~~claim 18~~ claim 17 wherein the next profile is defined in accordance with a last profile enabled immediately prior to the current profile such that said profile switch component switches back to the last profile.

19.   (Currently Amended)   A   computer   program   product
including a computer readable medium having a computer program
for instructing a processor in a mobile device ~~for managing
events~~ to control user notification of the events, the computer
program comprising:

code for ~~notifying a user of the occurrence of an event in
accordance with~~ enabling a first user notification profile
~~defining~~ defined by notification control options selected
by a user; and

code for switching automatically to a second user
notification profile ~~automatically in response to the
satisfaction of~~ when a switch condition is satisfied,
~~thereby to notify the user in accordance with~~ the second
user notification profile being defined by preset
notification control options.

20. (New)   The device of claim 10 wherein the profile
enablement component can be programmed to temporarily activate
one of the plurality of user notification profiles for a user-
determined period of time.
